## Use Case Diagrams

### Notations:

Symbol	Name
	Actor
	Object
	Association
	Use case
	Dependency
	Generalization
	Includes

### **Identification of Actors:**

- Students: They are the main actors who uses the system most. They can purchase the courses, learn and earn certification.
- Tutors: They are the actor who provides the system with the quality contents for the students to learn.
- Admin: The one who manages and has control over every sub process happening in the system. They also maintain the user records and responsible for the database operations.

### **Identification of Scenarios:**

#### **Success Scenarios:**

- A student creates an account successfully.
- The student logs into the system with his/her account.
- The student searches for an appropriate course of his/her choice and adds it to cart.
- The student enrolls to the course by purchasing the items in the cart and transactions are being handled by the billing system.
- The admin successfully adds or updates the user and course details in the database.
- The student uses the system till his/her enrolled courses are completed.
- The student earns a certificate on successful completion of the courses followed by an ID verification process.

#### **Failure Scenarios:**

- The Student does not have an account but tries to login to the system.
- The Course which the student intent to learn for is unavailable in the database.
- The Student enters wrong login credentials.

#### **Sub-functions:**

- Account creation

- Search courses
- Filtering courses
- Adding/Bookmarking the courses
- Purchasing the course
- Add/update/maintain the course database
- Maintain the user dashboard

## **Use case description**

**Scope:** Online Course Reservation System

**Level:** User goal

**Primary Actor:** Student, Tutor, Admin

**Stakeholders and Interest:**

**Instructors:**

Ensures providing quality content to the learners of the system.

**System:**

Mainly responsible for enrollment, billing and user progress maintenance.

**Admin:**

Responsible for the management of online activities and modifications in the database.

**Acquisition Manager:**

Authorizes the content given by the tutors.

**Student:**

Wants to enroll to a course in the system. Wants to earn an online course certification.

**Pre-Condition:**

Student and Tutor should have registered with the Online Course Reservation System. They should have a separate user id and password to login.

**Post-Condition:**

Student completes the course. Tutor provides the course content to the system.

**Main Success Scenario:**

- The student visits the website to access the Online Courses Reservation System.
- The student logs into the system with his/her account.
- The student continues his/her learning process of the enrolled courses or enrolls to new courses.
- The admin successfully adds or updates the user and course details in the database.
- The student will logout from the System.

**Specific requirements:**

The time to complete the course should be flexible.

## UML USE CASE MODEL
